## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3, 6, 8-9, 16-18 and 20-21, are rejected under 35 U.S.C. 102(e) as being anticipated by Browning et al, US. Pat. No. 6,415,388.
3. Claims 1, 6, 8, 17 and 20, Browning teaches a process for regulating voltage applied by a voltage regulator to an integrated circuit [*title, abstract*], comprising the steps of:
  - measuring instantaneous power consumption inside of the integrated circuit [col. 2, lines 1-2, col. 3, lines 48-51]; and
  - regulating said voltage according to the measured instantaneous power [col. 2, lines 3-5, col. 7, lines 42-43].
4. Claim 2, Browning teaches the integrated circuit comprises at least two units and wherein the step of measuring comprises sensing power consumption in at least two of said units, and computing instantaneous power consumption inside of the integrated circuit according to the sensed power consumption in said units [*Figs 3 and 4, col. 5, lines 38-50*].
5. Claims 3 and 21, Browning teaches the step of sensing power consumption in a unit comprises detecting state changes in signals output by said unit [col. 3, lines 53-58].

Art Unit: 2116

6. Claims 9 and 16, Browning teaches a voltage regulator, said voltage regulator being connected to said circuit and receiving the power consumption computed by power calculation unit [col. 3, lines 39-41].

7. Claims 18, Browning teaches the instantaneous power sensed inside the integrated circuit is sensed by a plurality of sensors inside the integrated circuit and a power calculation unit coupled to the plurality of sensors [power monitor 145 of Fig. 1].

***Allowable Subject Matter***

8. Claims 4-5, 10-15 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
